

TechZone Electronics (PVT) Ltd is a growing consumer electronics retailer headquartered in Colombo, Sri Lanka. The company has 10 branches across the country and deals in electronic products such as mobile phones, laptops, smart TVs, home appliances, and accessories.

TechZone currently faces challenges in handling business processes efficiently due to outdated systems for data collection and analysis. All customer **transactions, complaints, inventory movements, and supplier details** are manually handled using Excel spreadsheets at branch level. As a result, delays, human errors, miscommunication, and data loss frequently occur.

To address this, the company plans to digitize and automate its business processes using an integrated system that captures real-time data from all branches. They want to apply data-driven decision-making and are considering using data analytics and business intelligence tools like **Power BI or Python** to support business operations.

You are hired as a **Trainee Business Support Analyst** to guide TechZone in understanding the value of data, improving their business process efficiency, and implementing a modern data solution.
